FUME GRABBER

Grabber II series Articulated Arms

The **Fume Grabber**, Grabber II series articulated arms are designed for removing smoke, dust and gases directly at emission source before the contamination has spread throughout the work area or has reached the operators breathing zone.

Fume Grabber (Standard) extraction arms consist of cast iron rotational supporting head, two powder coated steel pipe segments, three flexible hose couplers, stiffening sections of aluminum terminated in the frictional articulations and the gas spring for balancing of an arm weight
