Improving Indoor Air Quality since 1975

DOWNDRAFT TABLES

DW Industrial Series

DW industrial series downdraft tables can be applied to several work stations and in different downdraft work surface configurations. This table has to be married to a dust collector that matches the contaminant to be collected. We can apply a cyclone collector with after filters, cartridge filters or a disposable filtration media. After filter arrangements can include HEPA or gas phase adsorption filtration. Start protecting your workers' breathing zone today with a downdraft table and separate dust collection system from *Environmental Clean Air Company*.
